REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The present application relates to a hot vehicle safety system and method for preventing passenger entrapment and heat suffocation. According to the claimed invention, there is provided providing a passenger safety system comprising a vehicle interior space occupancy sensor assembly that includes an ultrasound unit and a controller including a safety algorithm for activating a passenger/animal occupant alert, an exterior alert, a passenger/animal occupant relief and passenger/animal occupant release functions. The safety algorithm is implemented when a stopped condition of the vehicle is sensed by determining an occupancy state of the vehicle interior space selected from a passenger compartment and a load space based on the occupancy sensor, monitoring and evaluating interior temperature rise data extracted from an output of the ultrasound unit and progressively triggering at least two of an interior alert, an exterior alert, a heat release measure, and a passenger/animal occupancy release in response to criteria including the vehicle is in a stopped condition, the vehicle interior space occupancy state is occupied, and the monitored temperature satisfies a predetermined criteria. The aforementioned limitations and combination thereof are not taught in the prior art. In light of the foregoing, the claims of the present application are found to be patentable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
